

Territoriality and Spatiality - Two paramount concepts in furthering European Integration Theory

Dr . Franziska Sielker & Dr. Estelle Evrard
London | 15.11.2018

Interim Professor International Planning Studies

...concepts to further European Integration Theory?

Argument :

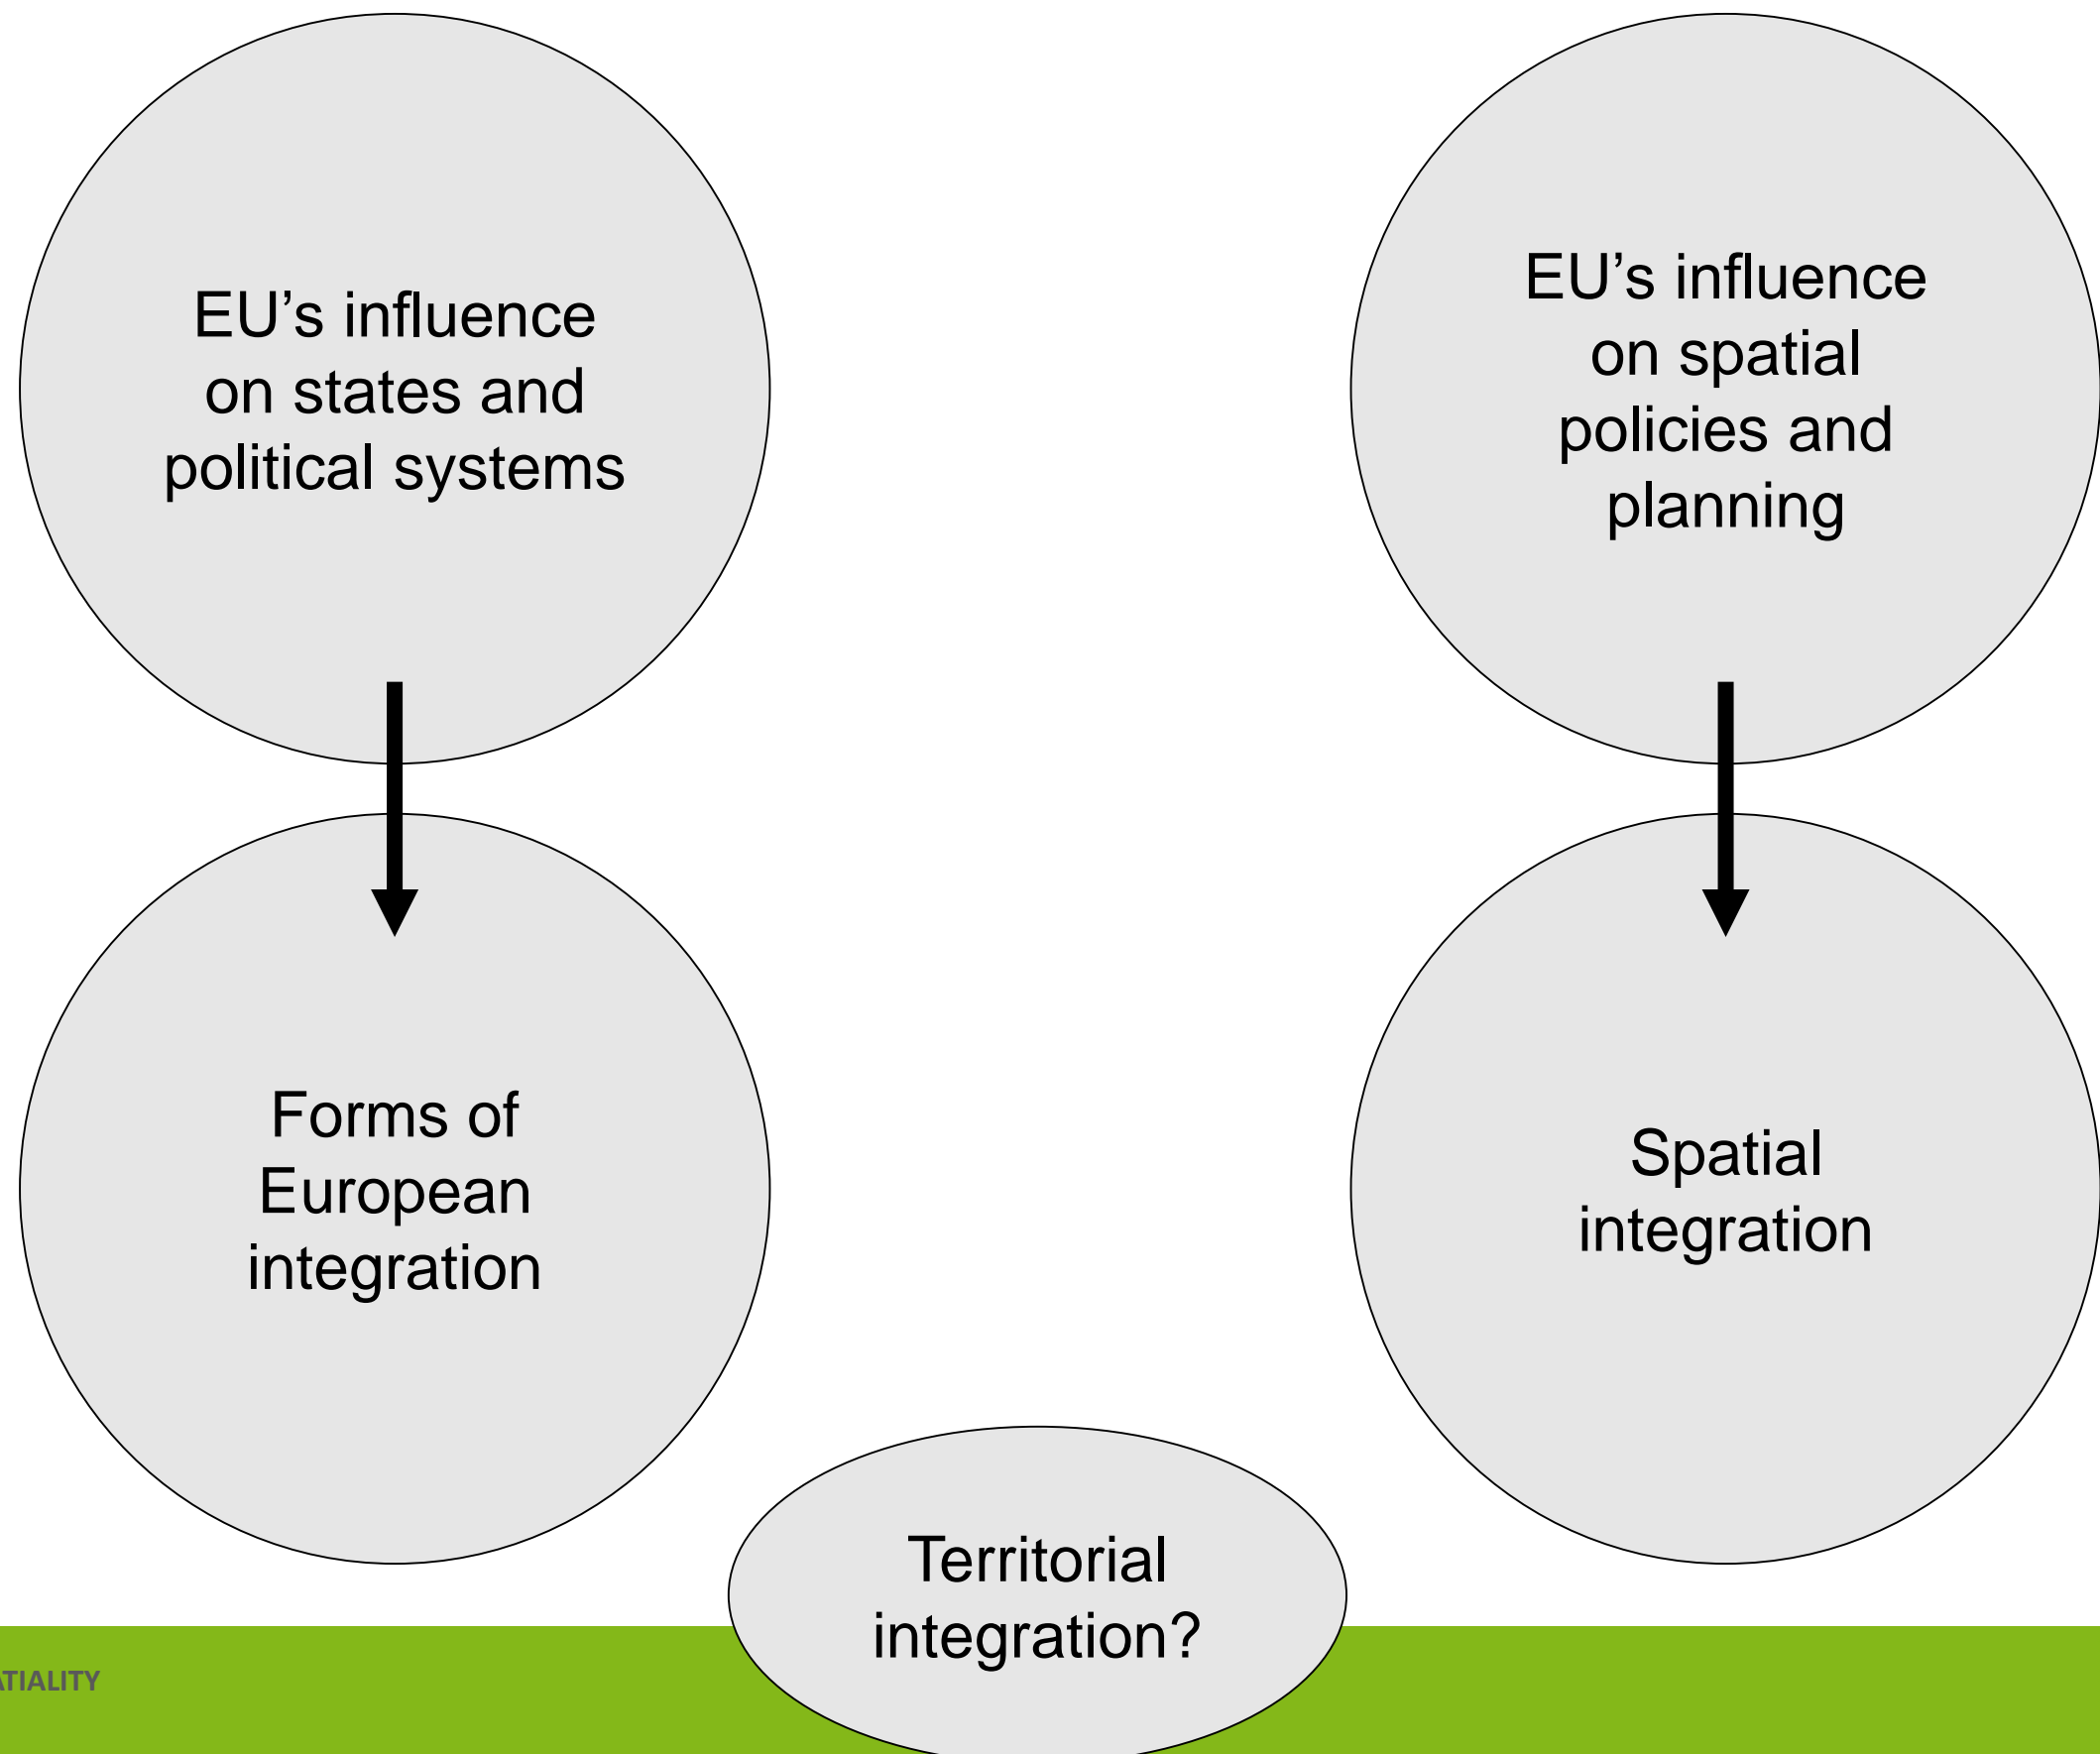

In order to understand the multidimensional dynamics of European integration, theory making needs to consider spatial relations and the role of spatial development more explicitly, and vice versa.

Space matters!

Political developments and peoples' vote depend to a much greater extent on spatial relations and (perceived) regional development than European integration theory suggest so far!

Spatial Integration and European Integration

Theoretical elements

Space matters!

Political developments and peoples' vote depend to a much greater extent on spatial relations and (perceived) regional development than European integration theory suggest so far!

Introducing the theoretical debates

Territoriality

Spatiality

European
Integration
theory

EU political project in space

(Spatial significance of EU polity?)

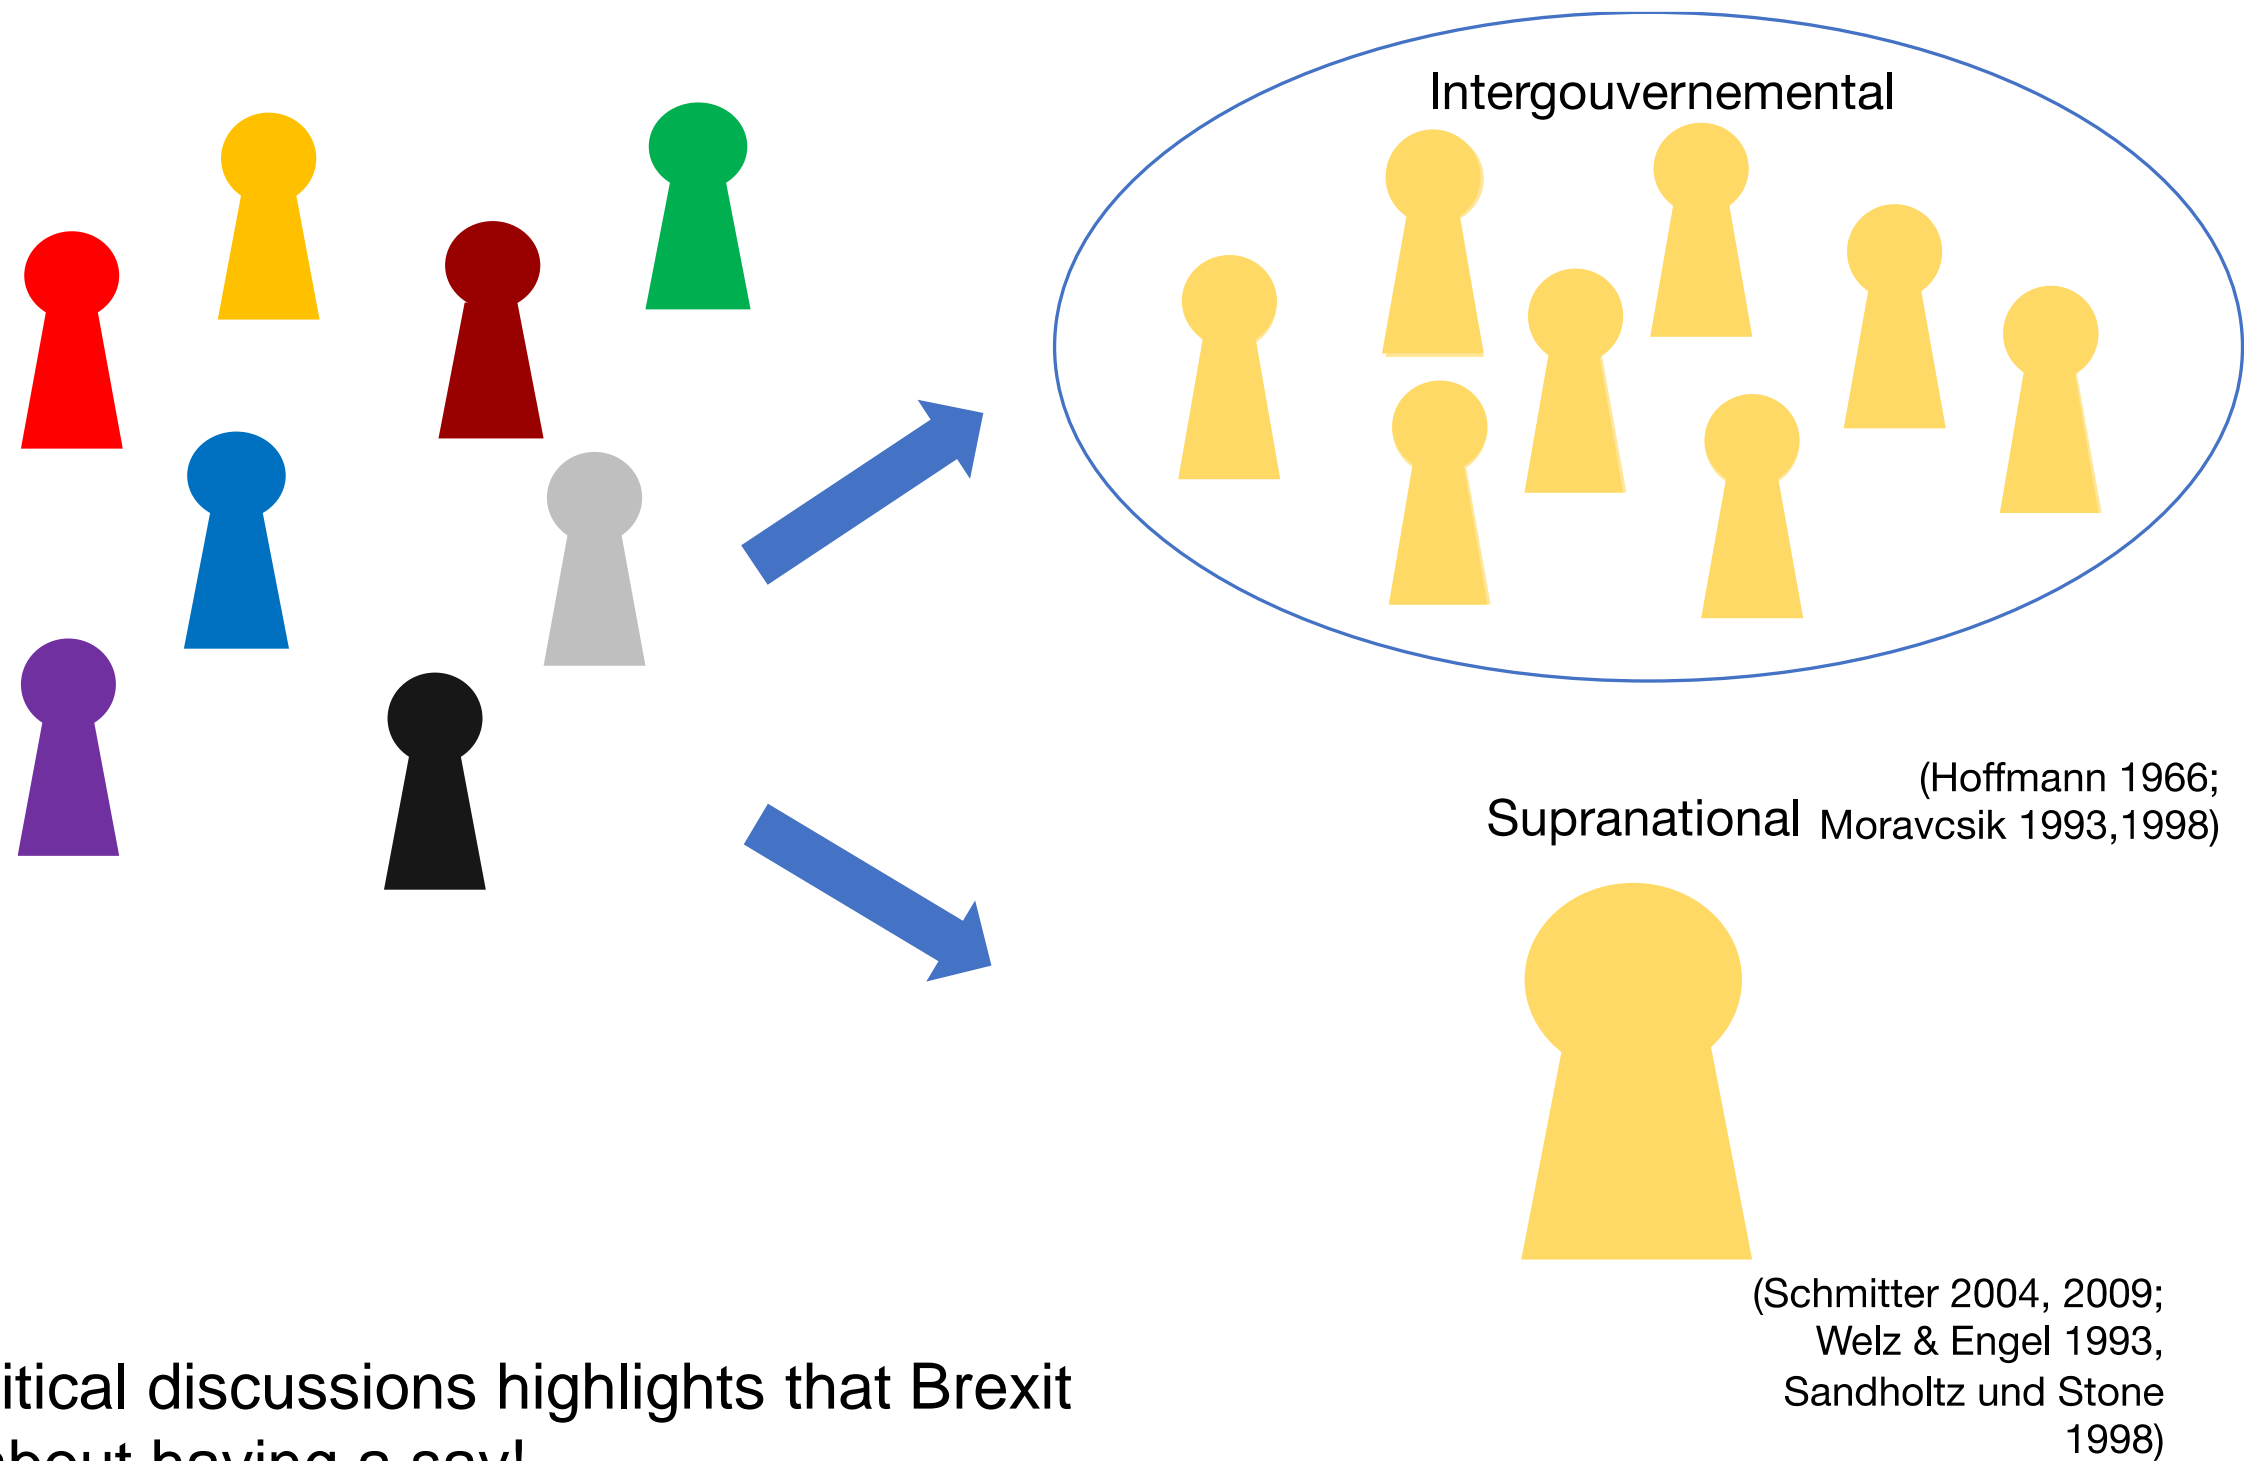

- Territorial scope of EU from a legal perspective (Ziller, 2007)
- Geographical integration can be understood as “graded membership” (Schimmelfenning)
- Bounding EU political project (Agnew, 2005), also from a critical perspective (Balibar, 2004); this process being accompanied by a process of « Othering » in respect to the neighbours (Bialasiewicz & Mamadouh, 2016)

The significance of EU integration process in space

(Spatial implications of EU polity?)

- Europe as a putative space of values on the one hand with territorial integrity on the other side (Bialasiewicz, Elden and Painter: 2005)
- Europeanization: how is it constructed to sustain EU's political geographies (Clark & Jones)
- Understanding European spatial planning (Faludi) and political objectives (e.g. cohesion policy, Stead 2014).

European integration

Territoriality

Territorial conceptions of space	
Actors	Nation state as sovereign, ,government‘
Spatial configuration	fixed territory, space as ,container‘ (Taylor 1994)
Character	static
Borders	hard boundaries, determined through territory (,spatial fix‘)
Scholars (exemplary)	Basis for international Right, Krassni, Heileiner, Cerny, Weiss

Amended from Chilla et al. 2015

Territoriality

	Territorial conceptions of space	Relational conceptions of space
Actors	Nation state as sovereign, ,government‘	networks, interest groups and ,stakeholders‘
Spatial configuration	fixed territory, space as ,container‘ (Taylor 1994)	deterritorialisation, Network society and ‘spaces of flows’ (Castells 2000)
Character	static	dynamic
Borders	hard boundaries, determined through territory (,spatial fix‘)	diminishing borders
Scholars (exemplary)	Basis for international Right, Krassni, Heileiner, Cerny, Weiss	Sack, Massay, Amin, Brenner, Harvey, Faludi, Murphy, Jessop, Castells, Agnew, Elden, Raustiala

Amended from Chilla et al. 2015

Territoriality

	Territorial conceptions of space	Intermediate approaches	Relational conceptions of space
Actors	Nation state as sovereign, ,government‘	dialectic relationship between public authorities and interest groups, ,governance‘	networks, interest groups and ,stakeholders‘
Spatial configuration	fixed territory, space as ,container‘ (Taylor 1994)	Parallelity of perception of territory, temporally limited creation of space	detrterritorialisation, Network society and ‘spaces of flows‘ (Castells 2000)
Character	static	dynamic	dynamic
Borders	hard boundaries, determined through territory (,spatial fix‘)	flexible or ,fuzzy‘ boundaries	diminishing borders
Scholars (exemplary)	Basis for international Right, Krassni, Heileiner, Cerny, Weiss	Mamadouh, Jones, Painter, Taylor, Paasi, Cochrane, Allmendinger/ Haughton, Gill, Teubner	Sack, Massay, Amin, Brenner, Harvey, Faludi, Murphy, Jessop, Castells, Agnew, Elden, Raustiala

Amended from Chilla et al. 2015

Spatial integration

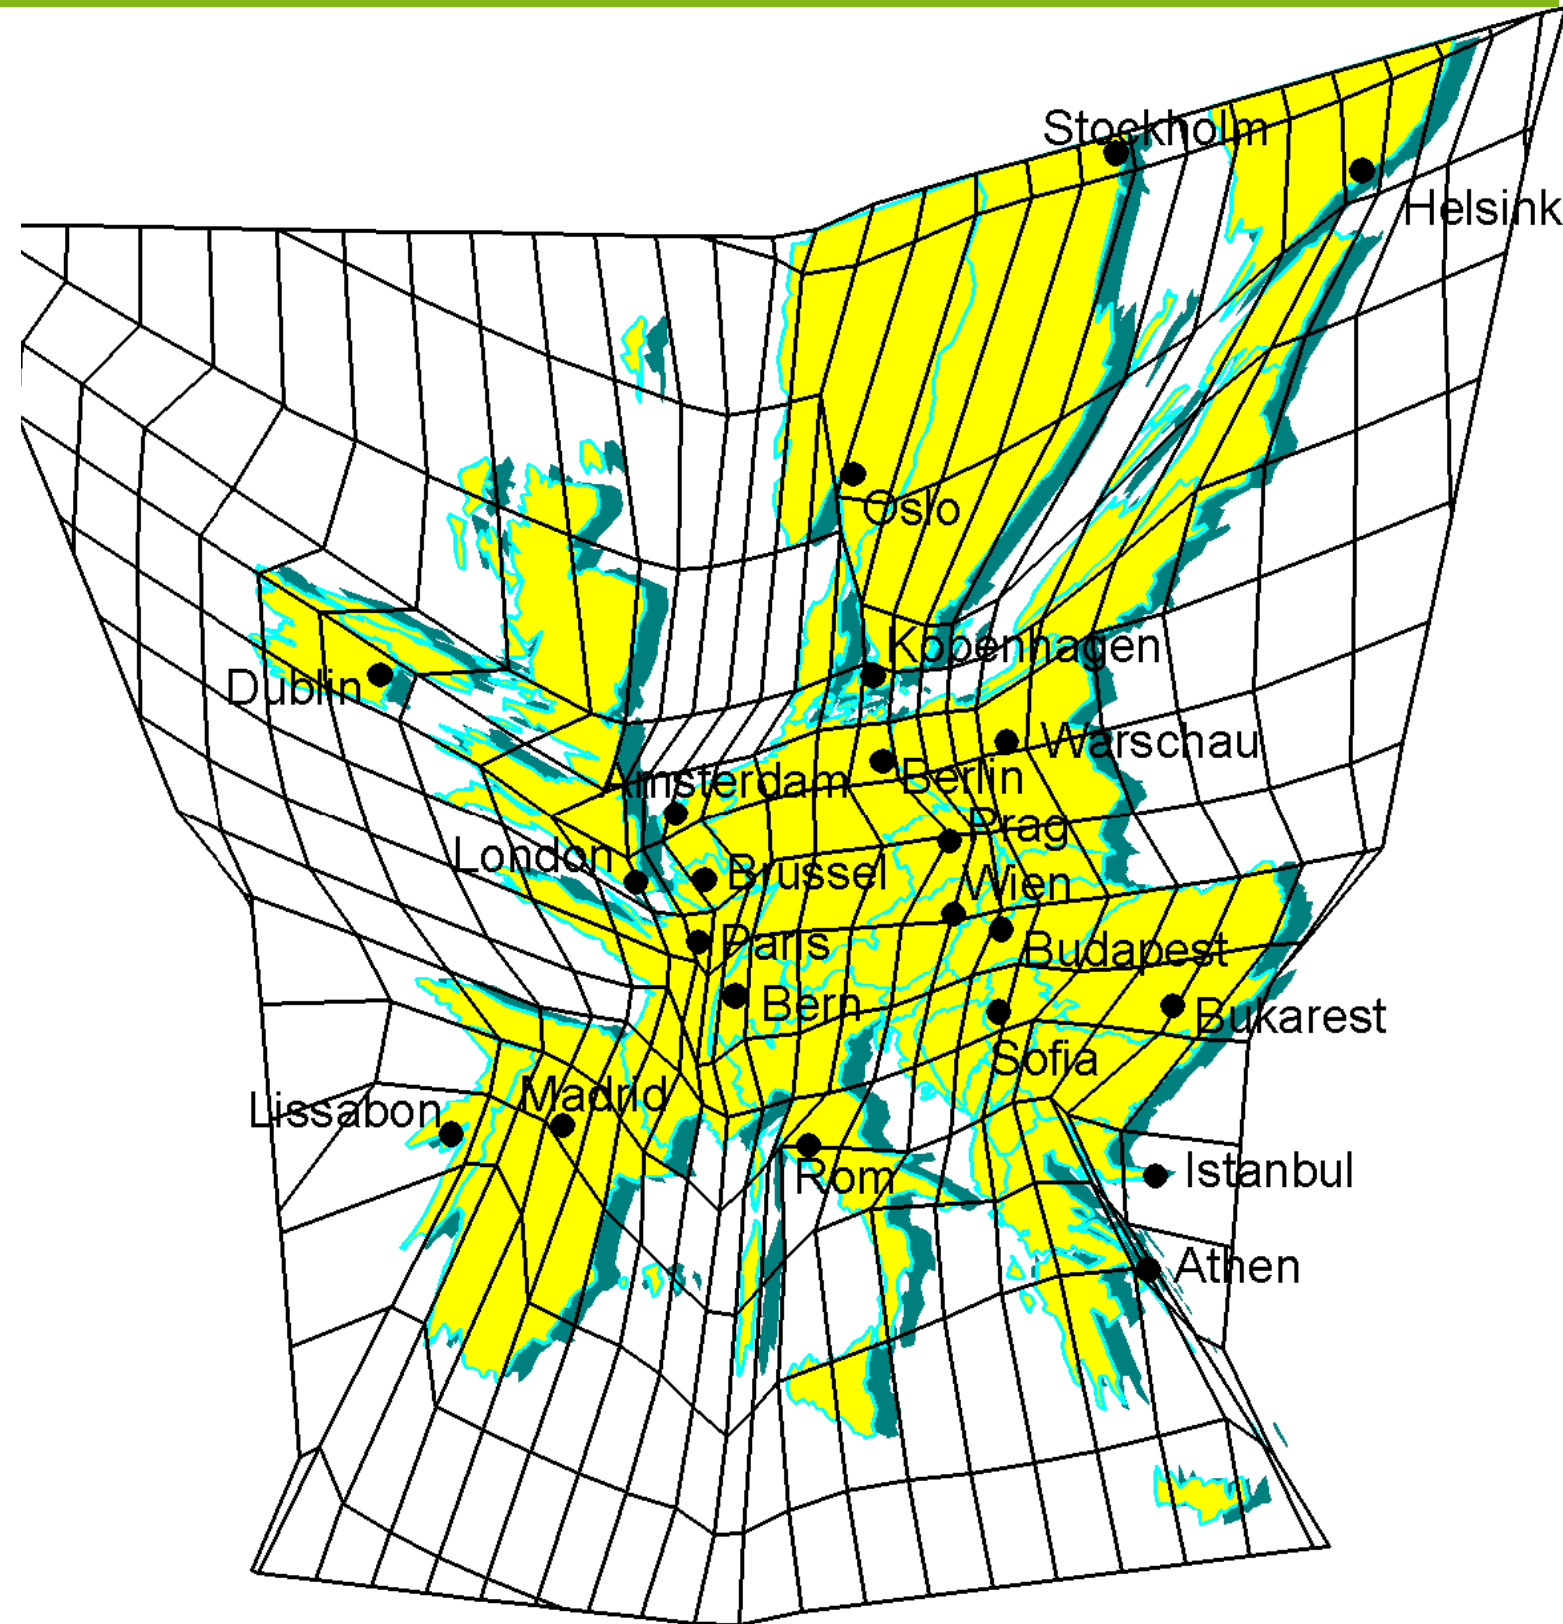

1. Non-integration

2. Integration

→ **Spatiality ?**

Space and spatiality – The role of perceptions

“Space is usually cast as physical or social space, with the former commonly constituting an effectively invisible backdrop to the complexity and vibrancy of social space.”
(Gregor, J. 2004 *Studying spatiality*)

Space and spatiality – The role of perceptions

“Space is usually cast as physical or social space, with the former commonly constituting an effectively invisible backdrop to the complexity and vibrancy of social space.”

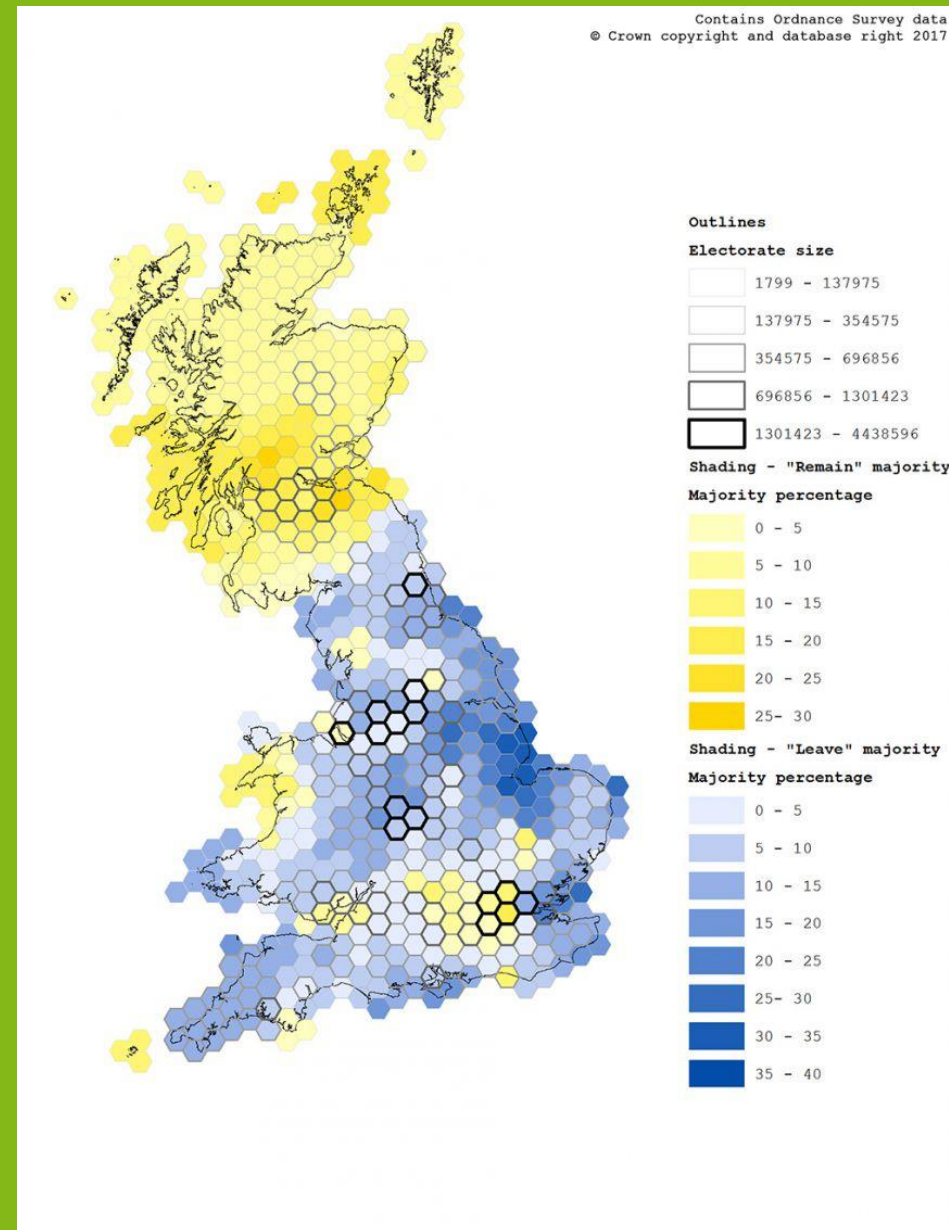

(Gregor, J. 2004 Studying spatiality)

- Spatial reality
- Perception of spatial reality and
- Perceived reality in comparison to perceived reality of other regions (e.g. distance to London)
- Perceived reality of dynamics of spatial development
- Role of space in and spatial reality

England's most deprived areas

Next Steps

Spatialising social and political theory?

Next steps

Bialasiewicz, Elden and Painter (2005) argue

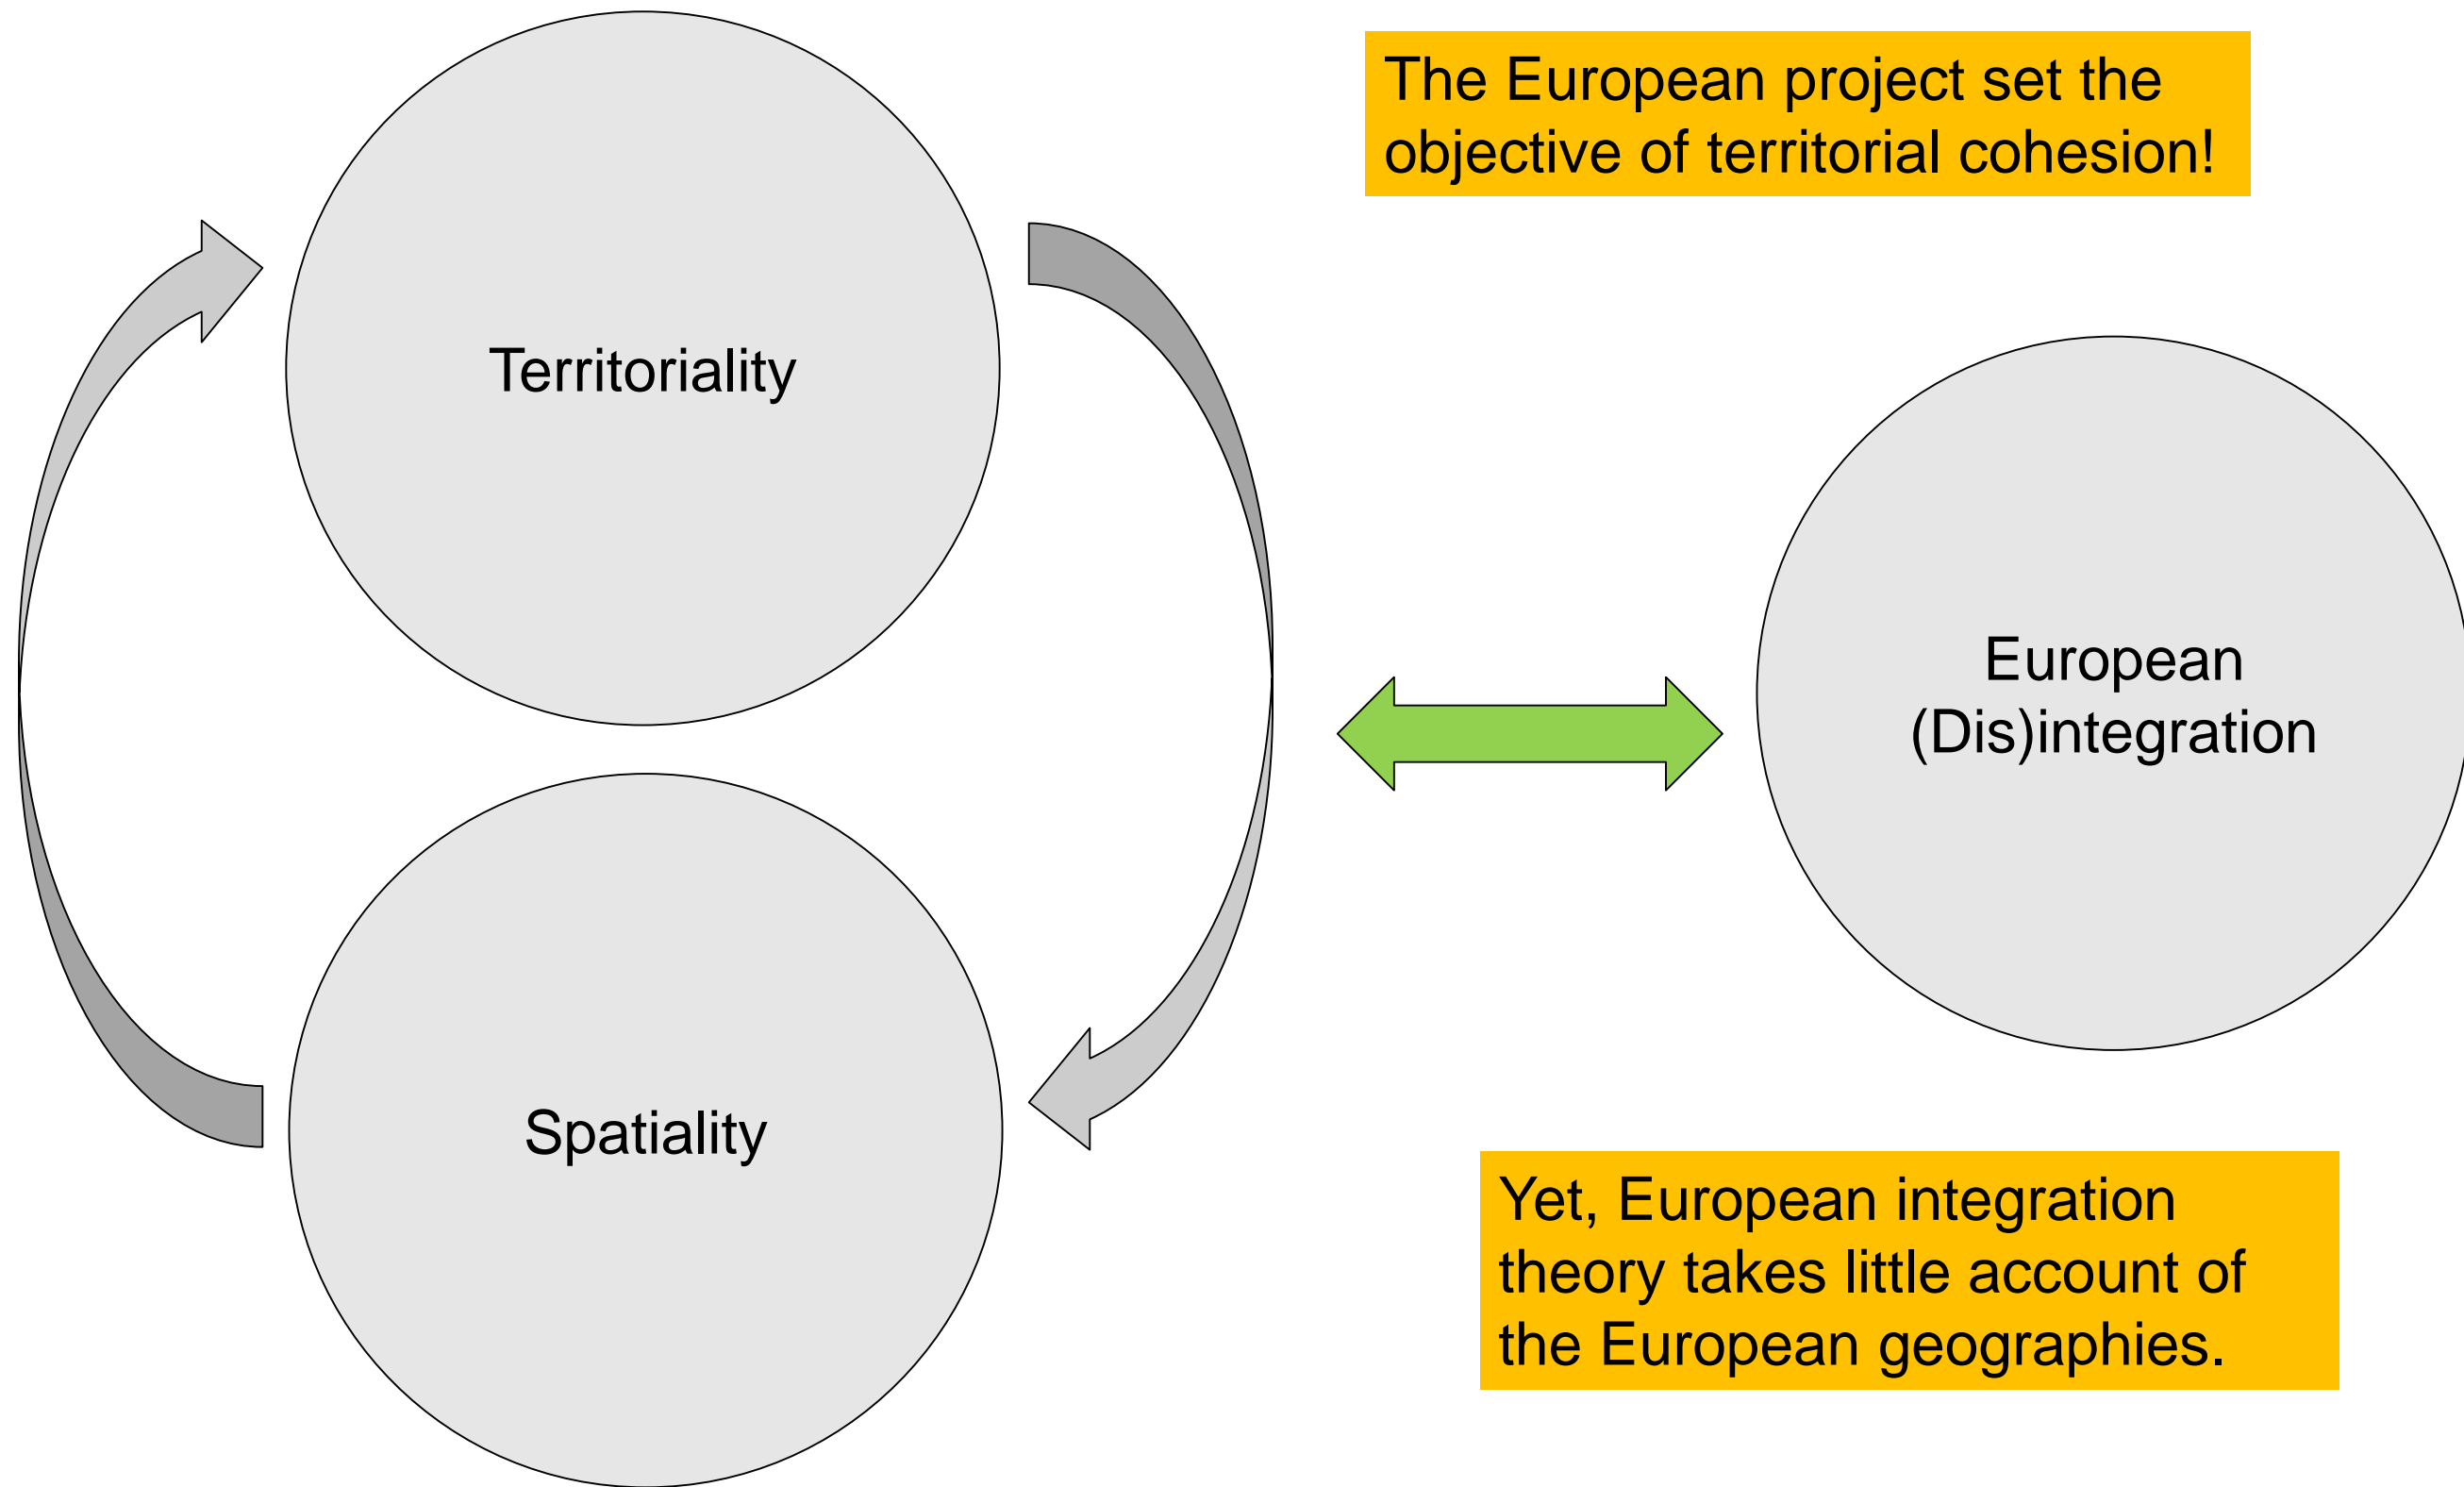

« there is a need for theorising the European project through a reading of territorial questions » (2015:3-4).

... and rightly point out

« all constitutive/constitutive acts enact a necessary fixing, an ordering of such values in space, they all presume territorialisations of power, security, identity; all are necessarily marked by the modern territorial imagination ».

→ EU polity is almost always implicitly territorialised and spatialised.

Context and Ambition

- Contribute to the « call for a sustained *spatial* investigation of the EU project » made by Bialasiewicz, Elden and Painter in 2005
- More precisely, these authors argue that « there is a need for theorising the European project through a reading of territorial questions » (2015:3-4). We would go even further by saying that the EU polity is implicitly territorialised and spatialised. As they rightly point out: « all constitutive/constatative acts enact a necessary fixing, an ordering of such values in space, they all presume territorialisations of power, security, identity; all are necessarily marked by the modern territorial imagination ».
- Yet, it is however striking to notice how European integration theory takes few account of the European geographies.
- A decade after constitutionalising "territorial cohesion" as an objective of the EU (and while no major initiative from the EU has been taken to implement it except maybe in cross-border areas), we look at examples of spatialities and territorialities demonstrating that implicitly EU policy do account a territorial dimension. By doing so, we intend to both observe diverse forms of spatialities and territorialities and to make a contribution to European integration theories
