### [RSA Member News](#)

A new book has recently been published [\*The Routledge Handbook of Regional Design\*](#), edited by Michael Neuman and Wil Zonneveld. Next to sections on the intellectual underpinnings and practices of regional design, and another on education, management and governance, there are also two large sections including a total of 16 case studies covering regions on six continents. Although there are some important differences in regional design, these case chapters show a genuine revival of design on the regional level.

With international case studies from leading scholars and practitioners, this book is an important resource not just for students, researchers, and practitioners of urban planning, but also policy makers, developers, architects, engineers, and anyone interested in the broader issues of urbanism. For more information, please click [here](#).
